

ABSTRACT

[0076] A modular multiple-mode gas-fueled assembly, comprises a holder. The holder is arranged to rest within a base grate or on the floor of a firebox. The holder includes a hollow distribution frame having an inlet port and a plurality of outlet ports. In one embodiment, each of the outlet ports are at the distal end of a respective column of the distribution frame. A plurality of support plates engage the outer surface of each respective column of the distribution frame. An imitation candle rests on each respective support plate. In an alternative embodiment, each of the plurality of outlet ports are substantially encompassed within imitation logs that rest on the holder.
